(54) **Composition for film formation, method of film formation, and silica-based film**

(57) A composition for film formation which comprises:

(A) a product of hydrolysis and condensation obtained by hydrolyzing and condensing at least one silane compound selected from the group consisting of compounds represented by the formula (1), compounds represented by the formula (2), and

compounds represented by the formula (3) in the presence of water and at least one compound selected from the group consisting of tetraalkylammonium hydroxides, alicyclic organic amines, and metal hydroxides, and
(B) an organic solvent.

EP 1 146 092 A2

Description

FIELD OF THE INVENTION

[0001] The present invention relates to a composition for film formation. More particularly, the invention relates to a composition for film formation which, when used as an interlayer insulating film material in the production of semiconductor devices and the like, can give a silica-based film excellent in dielectric constant characteristics after a PCT (pressure cooker test), resistance to CMP (chemical mechanical polishing) after a PCT, and adhesion to substrates after a PCT.

BACKGROUND OF THE INVENTION

[0002] Silica (SiO₂) films formed by vacuum processes such as the CVD method have hitherto been used frequently as interlayer insulating films in semiconductor devices and other devices. In recent years, an insulating coating film which comprises a tetraalkoxysilane hydrolyzate as the main component and is called an SOG (spin on glass) film has come to be used for the purpose of forming a more even interlayer insulating film. Furthermore, as a result of the trend toward higher degree of integration in semiconductor devices and the like, an interlayer insulating film called an organic SOG film has been developed which comprises a polyorganosiloxane as the main component and has a low dielectric constant.

[0003] With further progress in the degree of integration or multilayer constitution especially in semiconductor devices and the like, better electrical insulation between conductors has come to be required and, hence, an interlayer insulating film material having a lower dielectric constant and excellent cracking resistance has come to be desired.

[0004] Proposed as materials having a low dielectric constant are a composition comprising a mixture of fine particles obtained by condensing an alkoxysilane in the presence of ammonia and a basic product of partial hydrolysis of an alkoxysilane (see JP-A-5-263045 (the term "JP-A" as used herein means an "unexamined published Japanese patent application") and JP-A-5-315319) and a coating fluid obtained by condensing a basic hydrolyzate of a polyalkoxysilane in the presence of ammonia (see JP-A-11-340219 and JP-A-11-340220). However, the materials obtained by these methods are unsuitable for industrial production because the reaction products have unstable properties and the films obtained therefrom have considerable unevenness of properties such as dielectric constant characteristics after a PCT, resistance to CMP after a PCT, and adhesion to substrates after a PCT.

SUMMARY OF THE INVENTION

[0005] An object of the invention is to provide a composition for film formation which eliminates the problems described above. More particularly, the object is to provide a composition for film formation which, when used in the production of semiconductor devices and the like, can give an interlayer insulating film excellent in dielectric constant characteristics after a PCT, resistance to CMP after a PCT, and adhesion to substrates after a PCT. Another object of the invention is to provide a silica-based film obtained from the composition.

[0006] The invention provides a composition for film formation which comprises:

(A) a product of hydrolysis and condensation obtained by hydrolyzing and condensing at least one silane compound selected from the group consisting of compounds represented by the following formula (1) (hereinafter referred to as "compounds (1)"), compounds represented by the following formula (2) (hereinafter referred to as "compounds (2)"), and compounds represented by the following formula (3) (hereinafter referred to as "compounds (3)") in the presence of water and at least one compound selected from the group consisting of tetraalkylammonium hydroxides, alicyclic organic amines, and metal hydroxides (hereinafter referred to as "specific basic compound"),

wherein R represents a hydrogen atom, a fluorine atom, or a monovalent organic group; R¹ represents a monovalent organic group; and a is an integer of 1 or 2;

wherein R² represents a monovalent organic group;

wherein R^3 to R^6 may be the same or different and each represents a monovalent organic group; b and c may be the same or different and each is a number of 0 to 2; R^7 represents an oxygen atom, a phenylene group, or a group represented by $-(CH_2)_n-$, wherein n is an integer of 1 to 6; and d is 0 or 1; and
(B) an organic solvent.

[0007] The invention further provides a method of film formation which comprises applying the composition for film formation described above to a substrate and then heating the resultant coating.

[0008] The invention furthermore provides a silica-based film obtained by the method of film formation described above.

DETAILED DESCRIPTION OF THE INVENTION

[0009] The product of hydrolysis and condensation (A) in the invention means a mixture of a hydrolyzate of at least one member selected from the group consisting of the compounds (1) to (3) and a condensate of the hydrolyzate, or means either of the hydrolyzate and the condensate.

[0010] In the hydrolyzate in ingredient (A), all the R^1O- , R^2O- , R^4O- , and R^5O- groups contained in compounds (1) to (3) to constitute ingredient (A) need not have been hydrolyzed. For example, the hydrolyzate may be one in which only one of those groups has been hydrolyzed or two or more thereof have been hydrolyzed or may be a mixture of these.

[0011] The condensate in ingredient (A) means a product formed from the hydrolyzate of compounds (1) to (3) to constitute ingredient (A) by condensing silanol groups of the hydrolyzate to form Si-O-Si bonds. In the invention, however, all the silanol groups need not have undergone condensation. Namely, the term "condensate" as used herein means a concept which includes, for example, a condensate in which a slight proportion of the silanol groups have been condensed and a mixture of condensates which differ in the degree of condensation.

Product of Hydrolysis and Condensation (A)

[0012] The product of hydrolysis and condensation (A) is obtained by hydrolyzing and condensing, in the presence of a specific basic compound, at least one silane compound selected from the group consisting of compounds (1) to (3).

Compounds (1):

[0013] Examples of the monovalent organic groups represented by R and R^1 in formula (1) include alkyl, aryl, allyl, and glycidyl groups. In formula (1), R is preferably a monovalent organic group, more preferably an alkyl or phenyl group.

[0014] The alkyl group preferably has 1 to 5 carbon atoms, and examples thereof include methyl, ethyl, propyl, and butyl. These alkyl groups may be linear or branched, and may be ones in which one or more of the hydrogen atoms have been replaced, for example, with fluorine atoms.

[0015] In formula (1), examples of the aryl group include phenyl, naphthyl, methylphenyl, ethylphenyl, chlorophenyl, bromophenyl, and fluorophenyl.

[0016] Examples of the compounds represented by formula (1) include: trimethoxysilane, triethoxysilane, tri-*n*-propoxysilane, triisopropoxysilane, tri-*n*-butoxysilane, tri-*sec*-butoxysilane, tri-*tert*-butoxysilane, triphenoxysilane, fluorotrimethoxysilane, fluorotriethoxysilane, fluorotri-*n*-propoxysilane, fluorotriisopropoxysilane, fluorotri-*n*-butoxysilane, fluorotri-*sec*-butoxysilane, fluorotri-*tert*-butoxysilane, and fluorotriphenoxysilane; methyltrimethoxysilane, methyltriethoxysilane, methyltri-*n*-propoxysilane, methyltriisopropoxysilane, methyltri-*n*-butoxysilane, methyltri-*sec*-butoxysilane, methyltri-*tert*-butoxysilane, methyltriphenoxysilane, ethyltrimethoxysilane, ethyltriethoxysilane, ethyltri-*n*-propoxysilane, ethyltriisopropoxysilane, ethyltri-*n*-butoxysilane, ethyltri-*sec*-butoxysilane, ethyltri-*tert*-butoxysilane, ethyltriphenoxysilane, vinyltrimethoxysilane, vinyltriethoxysilane, vinyltri-*n*-propoxysilane, vinyltriisopropoxysilane, vinyltri-*n*-butoxysilane, vinyltri-*sec*-butoxysilane, vinyltri-*tert*-butoxysilane, vinyltriphenoxysilane, *n*-propyltrimethoxysilane, *n*-propyltriethoxysilane, *n*-propyltri-*n*-propoxysilane, *n*-propyltriisopropoxysilane, *n*-propyltri-*n*-butoxysilane, *n*-propyltri-*sec*-butoxysilane, *n*-propyltri-*tert*-butoxysilane, *n*-propyltriphenoxysilane, isopropyltrimethoxysilane, isopropyltriethoxysilane, isopropyltri-*n*-propoxysilane, isopropyltriisopropoxysilane, isopropyltri-*n*-butoxysilane, isopropyltri-*sec*-butoxysilane, isopropyltri-*tert*-butoxysilane, isopropyltriphenoxysilane, *n*-butyltrimethoxysilane, *n*-butyltriethoxysilane, *n*-butyltri-*n*-propoxysilane, *n*-butyltriisopropoxysilane, *n*-butyltri-*n*-butoxysilane, *n*-butyltri-*sec*-butoxysilane, *n*-butyltri-*tert*-butoxysilane, *n*-butyltriphenoxysilane, *sec*-butyltrimethoxysilane, *sec*-butyltriethoxysilane, *sec*-butyltri-*n*-propoxysilane, *sec*-butyltriisopropoxysilane, *sec*-butyltri-*n*-butoxysilane, *sec*-butyltri-*sec*-butoxysilane, *sec*-butyltri-*tert*-butox-

ysilane, sec-butyltriphenoxysilane, tert-butyltrimethoxysilane, tert-butyltriethoxysilane, tert-butyltri-n-propoxysilane, tert-butyltriisopropoxysilane, tert-butyltri-n-butoxysilane, tert-butyltri-sec-butoxysilane, tert-butyltri-tert-butoxysilane, tert-butyltriphenoxysilane, phenyltrimethoxysilane, phenyltriethoxysilane, phenyltri-n-propoxysilane, phenyltriisopropoxysilane, phenyltri-n-butoxysilane, phenyltri-sec-butoxysilane, phenyltri-tert-butoxysilane, phenyltriphenoxysilane, vinyltrimethoxysilane, vinyltriethoxysilane, γ -aminopropyltrimethoxysilane, γ -aminopropyltriethoxysilane, γ -glycidoxypropyltrimethoxysilane, γ -glycidoxypropyltriethoxysilane, γ -trifluoropropyltrimethoxysilane, and γ -trifluoropropyltriethoxysilane; and dimethyldimethoxysilane, dimethyldiethoxysilane, dimethyldi-n-propoxysilane, dimethyldiisopropoxysilane, dimethyldi-n-butoxysilane, dimethyldi-sec-butoxysilane, dimethyldi-tert-butoxysilane, dimethyldiphenoxysilane, diethyldimethoxysilane, diethyldiethoxysilane, diethyldi-n-propoxysilane, diethyldiisopropoxysilane, diethyldi-n-butoxysilane, diethyldi-sec-butoxysilane, diethyldi-tert-butoxysilane, diethyldiphenoxysilane, di-n-propyldimethoxysilane, di-n-propyldiethoxysilane, di-n-propyldi-n-propoxysilane, di-n-propyldiisopropoxysilane, di-n-propyldi-n-butoxysilane, di-n-propyldi-sec-butoxysilane, di-n-propyldi-tert-butoxysilane, di-n-propyldiphenoxysilane, diisopropyldimethoxysilane, diisopropyldiethoxysilane, diisopropyldi-n-propoxysilane, diisopropyldiisopropoxysilane, diisopropyldi-n-butoxysilane, diisopropyldi-sec-butoxysilane, diisopropyldi-tert-butoxysilane, diisopropyldiphenoxysilane, di-n-butyldimethoxysilane, di-n-butyldiethoxysilane, di-n-butyldi-n-propoxysilane, di-n-butyldiisopropoxysilane, di-n-butyldi-n-butoxysilane, di-n-butyldi-sec-butoxysilane, di-n-butyldi-tert-butoxysilane, di-n-butyldiphenoxysilane, di-sec-butyldiisopropoxysilane, di-sec-butyldi-n-butoxysilane, di-sec-butyldi-sec-butoxysilane, di-sec-butyldi-tert-butoxysilane, di-sec-butyldiphenoxysilane, di-tert-butyldimethoxysilane, di-tert-butyldiethoxysilane, di-tert-butyldi-n-propoxysilane, di-tert-butyldiisopropoxysilane, di-tert-butyldi-n-butoxysilane, di-tert-butyldi-sec-butoxysilane, di-tert-butyldi-tert-butoxysilane, di-tert-butyldiphenoxysilane, diphenyldimethoxysilane, diphenyldiethoxysilane, diphenyldi-n-propoxysilane, diphenyldiisopropoxysilane, diphenyldi-n-butoxysilane, diphenyldi-sec-butoxysilane, diphenyldi-tert-butoxysilane, diphenyldiphenoxysilane, and divinyltrimethoxysilane.

[0017] Preferred examples of the compounds (1) include methyltrimethoxysilane, methyltriethoxysilane, methyltri-n-propoxysilane, methyltriisopropoxysilane, ethyltrimethoxysilane, ethyltriethoxysilane, vinyltrimethoxysilane, vinyltriethoxysilane, phenyltrimethoxysilane, phenyltriethoxysilane, dimethyldimethoxysilane, dimethyldiethoxysilane, diethyldimethoxysilane, diethyldiethoxysilane, diphenyldimethoxysilane, and diphenyldiethoxysilane.

[0018] Those compounds may be used alone or in combination of two or more thereof.

Compounds (2):

[0019] Examples of the monovalent organic group represented by R^2 in formula (2) include the same monovalent organic groups as those enumerated above with regard to formula (1).

[0020] Examples of the compounds represented by formula (2) include tetramethoxysilane, tetraethoxysilane, tetra-n-propoxysilane, tetraisopropoxysilane, tetra-n-butoxysilane, tetra-sec-butoxysilane, tetra-tert-butoxysilane, and tetraphenoxysilane.

Compounds (3):

[0021] Examples of the monovalent organic groups represented by R^3 to R^6 in formula (3) include the same monovalent organic groups as those enumerated above with regard to formula (1).

[0022] Examples of the compounds represented by formula (3) wherein R^7 is an oxygen atom include hexamethoxydisiloxane, hexaethoxydisiloxane, hexaphenoxydisiloxane, 1,1,1,3,3-pentamethoxy-3-methyldisiloxane, 1,1,1,3,3-pentaethoxy-3-methyldisiloxane, 1,1,1,3,3-pentaphenox-3-methyldisiloxane, 1,1,1,3,3-pentamethoxy-3-ethyldisiloxane, 1,1,1,3,3-pentaethoxy-3-ethyldisiloxane, 1,1,1,3,3-pentaphenox-3-ethyldisiloxane, 1,1,1,3,3-pentamethoxy-3-phenyldisiloxane, 1,1,1,3,3-pentaethoxy-3-phenyldisiloxane, 1,1,1,3,3-pentaphenox-3-phenyldisiloxane, 1,1,3,3-tetramethoxy-1,3-dimethyldisiloxane, 1,1,3,3-tetraethoxy-1,3-dimethyldisiloxane, 1,1,3,3-tetraphenox-1,3-dimethyldisiloxane, 1,1,3,3-tetramethoxy-1,3-diethyldisiloxane, 1,1,3,3-tetraethoxy-1,3-diethyldisiloxane, 1,1,3,3-tetraphenox-1,3-diethyldisiloxane, 1,1,3,3-tetramethoxy-1,3-diphenyldisiloxane, 1,1,3,3-tetraethoxy-1,3-diphenyldisiloxane, 1,1,3-trimethoxy-1,3,3-trimethyldisiloxane, 1,1,3-triethoxy-1,3,3-trimethyldisiloxane, 1,1,3-triphenox-1,3,3-trimethyldisiloxane, 1,1,3-trimethoxy-1,3,3-triethyldisiloxane, 1,1,3-triethoxy-1,3,3-triethyldisiloxane, 1,1,3-triphenox-1,3,3-triethyldisiloxane, 1,1,3-trimethoxy-1,3,3-triphenyldisiloxane, 1,1,3-triethoxy-1,3,3-triphenyldisiloxane, 1,1,3-triphenox-1,3,3-triphenyldisiloxane, 1,3-dimethoxy-1,1,3,3-tetramethyldisiloxane, 1,3-diethoxy-1,1,3,3-tetramethyldisiloxane, 1,3-diphenox-1,1,3,3-tetramethyldisiloxane, 1,3-dimethoxy-1,1,3,3-tetraethyldisiloxane, 1,3-diethoxy-1,1,3,3-tetraethyldisiloxane, 1,3-diphenox-1,1,3,3-tetraethyldisiloxane, 1,3-dimethoxy-1,1,3,3-tetraphenyldisiloxane, 1,3-diethoxy-1,1,3,3-tetraphenyldisiloxane, and 1,3-diphenox-1,1,3,3-tetraphenyldisiloxane.

[0023] Preferred of those compounds are hexamethoxydisiloxane, hexaethoxydisiloxane, 1,1,3,3-tetramethoxy-

1,3-dimethyldisiloxane, 1,1,3,3-tetraethoxy-1,3-dimethyldisiloxane, 1,1,3,3-tetramethoxy-1,3-diphenyldisiloxane, 1,3-dimethoxy-1,1,3,3-tetramethyldisiloxane, 1,3-diethoxy-1,1,3,3-tetramethyldisiloxane, 1,3-dimethoxy-1,1,3,3-tetraphenyldisiloxane, and 1,3-diethoxy-1,1,3,3-tetraphenyldisiloxane.

[0024] Examples of the compounds represented by formula (3) wherein d is 0 include hexamethoxydisilane, hexaethoxydisilane, hexaphenoxysilane, 1,1,1,2,2-pentamethoxy-2-methyldisilane, 1,1,1,2,2-pentaethoxy-2-methyldisilane, 1,1,1,2,2-pentaphenoxy-2-methyldisilane, 1,1,1,2,2-pentamethoxy-2-ethyldisilane, 1,1,1,2,2-pentaphenoxy-2-ethyldisilane, 1,1,1,2,2-pentamethoxy-2-phenyldisilane, 1,1,1,2,2-pentaphenoxy-2-phenyldisilane, 1,1,2,2-tetramethoxy-1,2-dimethyldisilane, 1,1,2,2-tetraethoxy-1,2-dimethyldisilane, 1,1,2,2-tetraphenoxy-1,2-dimethyldisilane, 1,1,2,2-tetramethoxy-1,2-diethyldisilane, 1,1,2,2-tetraethoxy-1,2-diethyldisilane, 1,1,2,2-tetraphenoxy-1,2-diethyldisilane, 1,1,2,2-tetramethoxy-1,2-diphenyldisilane, 1,1,2,2-tetraethoxy-1,2-diphenyldisilane, 1,1,2,2-tetraphenoxy-1,2-diphenyldisilane, 1,1,2-trimethoxy-1,2,2-trimethyldisilane, 1,1,2-triethoxy-1,2,2-trimethyldisilane, 1,1,2-triphenoxy-1,2,2-trimethyldisilane, 1,1,2-trimethoxy-1,2,2-triethyldisilane, 1,1,2-triethoxy-1,2,2-triethyldisilane, 1,1,2-triphenoxy-1,2,2-triethyldisilane, 1,1,2-trimethoxy-1,2,2-triphenyldisilane, 1,1,2-triethoxy-1,2,2-triphenyldisilane, 1,1,2-triphenoxy-1,2,2-triphenyldisilane, 1,2-dimethoxy-1,1,2,2-tetramethyldisilane, 1,2-diethoxy-1,1,2,2-tetramethyldisilane, 1,2-diphenoxy-1,1,2,2-tetramethyldisilane, 1,2-dimethoxy-1,1,2,2-tetraethyldisilane, 1,2-diethoxy-1,1,2,2-tetraethyldisilane, 1,2-diphenoxy-1,1,2,2-tetraethyldisilane, 1,2-dimethoxy-1,1,2,2-tetraphenyldisilane, 1,2-diethoxy-1,1,2,2-tetraphenyldisilane, and 1,2-diphenoxy-1,1,2,2-tetraphenyldisilane.

[0025] Preferred of those compounds are hexamethoxydisilane, hexaethoxydisilane, 1,1,2,2-tetramethoxy-1,2-dimethyldisilane, 1,1,2,2-tetraethoxy-1,2-dimethyldisilane, 1,1,2,2-tetramethoxy-1,2-diphenyldisilane, 1,2-dimethoxy-1,1,2,2-tetramethyldisilane, 1,2-diethoxy-1,1,2,2-tetramethyldisilane, 1,2-dimethoxy-1,1,2,2-tetraphenyldisilane, and 1,2-diethoxy-1,1,2,2-tetraphenyldisilane.

[0026] Examples of the compounds represented by formula (3) wherein R⁷ is a group represented by -(CH₂)_n- include bis(trimethoxysilyl)methane, bis(triethoxysilyl)methane, bis(tri-n-propoxysilyl)methane, bis(triisopropoxysilyl)methane, bis(tri-n-butoxysilyl)methane, bis(tri-sec-butoxysilyl)methane, bis(tri-t-butoxysilyl)methane, 1,2-bis(trimethoxysilyl)ethane, 1,2-bis(triethoxysilyl)ethane, 1,2-bis(tri-n-propoxysilyl)ethane, 1,2-bis(triisopropoxysilyl)ethane, 1,2-bis(tri-n-butoxysilyl)ethane, 1,2-bis(tri-sec-butoxysilyl)ethane, 1,2-bis(tri-t-butoxysilyl)ethane, 1-(dimethoxymethylsilyl)-1-(triethoxysilyl)methane, 1-(diethoxymethylsilyl)-1-(triethoxysilyl)methane, 1-(di-n-propoxymethylsilyl)-1-(tri-n-propoxysilyl)methane, 1-(diisopropoxymethylsilyl)-1-(triisopropoxysilyl)methane, 1-(di-n-butoxymethylsilyl)-1-(tri-n-butoxysilyl)methane, 1-(di-sec-butoxymethylsilyl)-1-(tri-sec-butoxysilyl)methane, 1-(di-t-butoxymethylsilyl)-1-(tri-t-butoxysilyl)methane, 1-(dimethoxymethylsilyl)-2-(trimethoxysilyl)ethane, 1-(diethoxymethylsilyl)-2-(triethoxysilyl)ethane, 1-(di-n-propoxymethylsilyl)-2-(tri-n-propoxysilyl)ethane, 1-(diisopropoxymethylsilyl)-2-(triisopropoxysilyl)ethane, 1-(di-n-butoxymethylsilyl)-2-(tri-n-butoxysilyl)ethane, 1-(di-sec-butoxymethylsilyl)-2-(tri-sec-butoxysilyl)ethane, 1-(di-t-butoxymethylsilyl)-2-(tri-t-butoxysilyl)ethane, bis(dimethoxymethylsilyl)methane, bis(diethoxymethylsilyl)methane, bis(di-n-propoxymethylsilyl)methane, bis(diisopropoxymethylsilyl)methane, bis(di-n-butoxymethylsilyl)methane, bis(di-sec-butoxymethylsilyl)methane, bis(di-t-butoxymethylsilyl)methane, 1,2-bis(dimethoxymethylsilyl)ethane, 1,2-bis(diethoxymethylsilyl)ethane, 1,2-bis(di-n-propoxymethylsilyl)ethane, 1,2-bis(diisopropoxymethylsilyl)ethane, 1,2-bis(di-n-butoxymethylsilyl)ethane, 1,2-bis(di-sec-butoxymethylsilyl)ethane, 1,2-bis(di-t-butoxymethylsilyl)ethane, 1,2-bis(trimethoxysilyl)benzene, 1,2-bis(triethoxysilyl)benzene, 1,2-bis(tri-n-propoxysilyl)benzene, 1,2-bis(triisopropoxysilyl)benzene, 1,2-bis(tri-n-butoxysilyl)benzene, 1,2-bis(tri-sec-butoxysilyl)benzene, 1,2-bis(tri-t-butoxysilyl)benzene, 1,3-bis(trimethoxysilyl)benzene, 1,3-bis(triethoxysilyl)benzene, 1,3-bis(tri-n-propoxysilyl)benzene, 1,3-bis(triisopropoxysilyl)benzene, 1,3-bis(tri-n-butoxysilyl)benzene, 1,3-bis(tri-sec-butoxysilyl)benzene, 1,3-bis(tri-t-butoxysilyl)benzene, 1,4-bis(trimethoxysilyl)benzene, 1,4-bis(triethoxysilyl)benzene, 1,4-bis(tri-n-propoxysilyl)benzene, 1,4-bis(triisopropoxysilyl)benzene, 1,4-bis(tri-n-butoxysilyl)benzene, 1,4-bis(tri-sec-butoxysilyl)benzene, and 1,4-bis(tri-t-butoxysilyl)benzene.

[0027] Preferred of those compounds are bis(trimethoxysilyl)methane, bis(triethoxysilyl)methane, 1,2-bis(trimethoxysilyl)ethane, 1,2-bis(triethoxysilyl)ethane, 1-(dimethoxymethylsilyl)-1-(triethoxysilyl)methane, 1-(diethoxymethylsilyl)-1-(triethoxysilyl)methane, 1-(dimethoxymethylsilyl)-2-(trimethoxysilyl)ethane, 1-(diethoxymethylsilyl)-2-(triethoxysilyl)ethane, bis(dimethoxymethylsilyl)methane, bis(diethoxymethylsilyl)methane, 1,2-bis(dimethoxymethylsilyl)ethane, 1,2-bis(diethoxymethylsilyl)ethane, 1,2-bis(trimethoxysilyl)benzene, 1,2-bis(triethoxysilyl)benzene, 1,3-bis(trimethoxysilyl)benzene, 1,3-bis(triethoxysilyl)benzene, 1,4-bis(trimethoxysilyl)benzene, and 1,4-bis(triethoxysilyl)benzene.

[0028] In the invention, the compounds (1), (2), and (3) described above may be used alone or in combination of two or more thereof to constitute ingredient (A).

[0029] When at least one silane compound selected from the group consisting of the compounds (1) to (3) is hydrolyzed and condensed, water is used in an amount of preferably from more than 20 mol to 150 mol, more preferably from more than 20 mol to 130 mol, per mol of the at least one compound selected from the compounds (1) to (3). If water is added in an amount of 20 mol or smaller, there are cases where the resultant composition gives a coating film

having poor cracking resistance. On the other hand, if the amount of water added is larger than 150 mol, there are cases where polymer precipitation or gelation occurs during the hydrolysis and condensation reactions.

[0030] The addition of at least one silane compound selected from the group consisting of the compounds (1) to (3) to the reaction mixture may be conducted en bloc, or may be conducted continuously or intermittently. In the case where at least one silane compound selected from the group consisting of the compounds (1) to (3) is added continuously or intermittently, the period of addition is preferably from 5 minutes to 12 hours.

[0031] The production of the product of hydrolysis and condensation (A) for use in the invention is characterized in that a specific basic compound is used in hydrolyzing and condensing at least one silane compound selected from the group consisting of the compounds (1) to (3).

[0032] By using a specific basic compound, a silica-based film having a low dielectric constant, a high modulus of elasticity, and excellent adhesion to substrates can be obtained.

[0033] Examples of specific basic compounds which can be used in the invention include tetraalkylammonium hydroxides such as tetramethylammonium hydroxide, tetraethylammonium hydroxide, tetrapropylammonium hydroxide, and tetrabutylammonium hydroxide, alicyclic organic amines such as piperidine, 1-methylpiperidine, 2-methylpiperidine, 3-methylpiperidine, 4-methylpiperidine, piperazine, 1-methylpiperazine, 2-methylpiperazine, 1,4-dimethylpiperazine, pyrrolidine, 1-methylpyrrolidine, diazabicyclooctane, diazabicyclononane, diazabicycloundecene, 2-pyrazoline, 3-pyrroline, and quinuclidine, and metal hydroxides such as sodium hydroxide, potassium hydroxide, lithium hydroxide, and cesium hydroxide. Especially preferred of these from the standpoint of the adhesion of a silica-based film to substrates are tetramethylammonium hydroxide, tetraethylammonium hydroxide, tetrapropylammonium hydroxide, tetrabutylammonium hydroxide, piperidine, 1-methylpiperidine, piperazine, 1-methylpiperazine, 1,4-dimethylpiperazine, pyrrolidine, 1-methylpyrrolidine, diazabicyclooctane, diazabicyclononane, diazabicycloundecene, sodium hydroxide, potassium hydroxide, and lithium hydroxide.

[0034] Those specific basic compounds may be used alone or in combination of two or more thereof.

[0035] The specific basic compound is used in an amount of generally from 0.00001 to 10 mol, preferably from 0.00005 to 5 mol, more preferably from 0.001 to 1 mol, most preferably from 0.01 to 0.5 mol, per mol of the total amount of the R¹O-, R²O-, R⁴O-, and R⁵O- groups contained in the compounds (1) to (3). As long as the specific basic compound is used in an amount within that range, polymer precipitation or gelatin is less apt to occur during the reaction.

[0036] The radius of gyration of the product of hydrolysis and condensation (A) thus obtained is preferably from 5 to 50 nm, more preferably from 8 to 40 nm, most preferably from 9 to 20 nm, in terms of radius of gyration determined by the GPC (refractive index, viscosity, or light scattering) method. When the product of hydrolysis and condensation has a radius of gyration of from 5 to 50 nm, the composition can give a silica-based film excellent especially in dielectric constant, modulus of elasticity, and evenness of the film.

[0037] The product of hydrolysis and condensation (A) thus obtained is characterized by being not particulate and hence having excellent applicability to substrates. That the product of hydrolysis and condensation (A) is not particulate can be ascertained through examination with, e.g., a transmission electron microscope (TEM).

[0038] In ingredient (A), the proportion of the product of hydrolysis and condensation derived from each compound is as follows, in terms of the product of complete hydrolysis and condensation. The content of the product of hydrolysis and condensation derived from the compound (2) is generally from 5 to 75% by weight, preferably from 10 to 70% by weight, more preferably from 15 to 70% by weight, based on the sum of all the products of hydrolysis and condensation derived from the compounds (1) to (3). The content of the product of hydrolysis and condensation derived from the compound (1) and/or compound (3) is generally from 95 to 25% by weight, preferably from 90 to 30% by weight, more preferably from 85 to 30% by weight, based on the sum of all the products of hydrolysis and condensation derived from the compounds (1) to (3). When the content of the product of hydrolysis and condensation derived from the compound (2) is from 5 to 75% by weight based on the sum of all the products of hydrolysis and condensation derived from the compounds (1) to (3), then the coating film obtained has a high modulus of elasticity and an exceedingly low dielectric constant.

[0039] The term "product of complete hydrolysis and condensation" as used herein means a product in which all the R¹O-, R²O-, R⁴O-, and R⁵O- groups contained in the compound (1), (2), or (3) have been hydrolyzed into SiOH groups and then completely condensed to form siloxane structures.

[0040] Ingredient (A) is preferably a product of the hydrolysis and condensation of a mixture of at least one of the compounds (1) and at least one of the compounds (2), because this ingredient (A) imparts better storage stability to the composition to be obtained.

[0041] In producing a product of hydrolysis and condensation (A), at least one silane compound selected from the group consisting of compounds (1) to (3) is hydrolyzed and condensed in the presence of a specific basic compound so that the resultant product of hydrolysis and condensation preferably has a radius of gyration of from 5 to 50 nm. It is preferred to adjust the pH of the resultant composition to 7 or lower.

[0042] Examples of techniques for pH adjustment include:

- (1) to add a pH regulator;
- (2) to distill off the specific basic compound from the composition at ordinary or reduced pressure;
- (3) to bubble a gas such as nitrogen or argon into the composition to thereby remove the specific basic compound from the composition;
- (4) to remove the specific basic compound from the composition with an ion-exchange resin; and
- (5) to remove the specific basic compound from the system by extraction or washing.

Those techniques may be used alone or in combination of two or more thereof.

[0043] Examples of the pH regulator include inorganic acids and organic acids.

[0044] Examples of the inorganic acids include hydrochloric acid, nitric acid, sulfuric acid, hydrofluoric acid, phosphoric acid, boric acid, and oxalic acid.

[0045] Examples of the organic acids include acetic acid, propionic acid, butanoic acid, pentanoic acid, hexanoic acid, heptanoic acid, octanoic acid, nonanoic acid, decanoic acid, oxalic acid, maleic acid, methylmalonic acid, adipic acid, sebacic acid, gallic acid, butyric acid, mellitic acid, arachidonic acid, shikimic acid, 2-ethylhexanoic acid, oleic acid, stearic acid, linoleic acid, linolenic acid, salicylic acid, benzoic acid, p-aminobenzoic acid, p-toluenesulfonic acid, benzenesulfonic acid, monochloroacetic acid, dichloroacetic acid, trichloroacetic acid, trifluoroacetic acid, formic acid, malonic acid, sulfonic acids, phthalic acid, fumaric acid, citric acid, tartaric acid, succinic acid, itaconic acid, mesaconic acid, citraconic acid, malic acid, a glutaric acid hydrolyzate, a maleic anhydride hydrolyzate, and a phthalic anhydride hydrolyzate.

[0046] Those compounds may be used alone or in combination of two or more thereof.

[0047] Such a pH regulator is used to adjust the pH of the composition to 7 or lower, preferably 1 to 6. The method described above which comprises regulating the radius of gyration of the product of hydrolysis and condensation to from 5 to 50 nm and then adjusting the pH thereof with the pH regulator to a value within that range produces the effect that the composition obtained has improved storage stability.

[0048] The pH regulator is used in an amount suitably selected so that the pH of the composition becomes a value within that range.

Organic Solvent (B)

[0049] The composition for film formation of the invention comprises ingredient (A) usually dissolved or dispersed in an organic solvent (B).

[0050] This organic solvent (B) may comprise at least one member selected from the group consisting of alcohol solvents, ketone solvents, amide solvents, ester solvents, and aprotic solvents.

[0051] Examples of the alcohol solvents include monohydric alcohols such as methanol, ethanol, n-propanol, isopropanol, n-butanol, isobutanol, sec-butanol, t-butanol, n-pentanol, isopentanol, 2-methylbutanol, sec-pentanol, t-pentanol, 3-methoxybutanol, n-hexanol, 2-methylpentanol, sec-hexanol, 2-ethylbutanol, sec-heptanol, heptanol-3, n-octanol, 2-ethylhexanol, sec-octanol, n-nonyl alcohol, 2,6-dimethylheptanol-4, n-decanol, sec-undecylalcohol, trimethylnonylalcohol, sec-tetradecylalcohol, sec-heptadecyl alcohol, phenol, cyclohexanol, methylcyclohexanol, 3,3,5-trimethylcyclohexanol, benzyl alcohol, and diacetone alcohol; polyhydric alcohols such as ethylene glycol, 1,2-propylene glycol, 1,3-butylene glycol, pentanediol-2,4, 2-methylpentanediol-2,4, hexanediol-2,5, heptanediol-2,4, 2-ethylhexanediol-1,3, diethylene glycol, dipropylene glycol, triethylene glycol, and tripropylene glycol; and partial ethers of polyhydric alcohols, such as ethylene glycol monomethyl ether, ethylene glycol monoethyl ether, ethylene glycol monopropyl ether, ethylene glycol monobutyl ether, ethylene glycol monohexyl ether, ethylene glycol monophenyl ether, ethylene glycol mono-2-ethylbutyl ether, diethylene glycol monomethyl ether, diethylene glycol monoethyl ether, diethylene glycol monopropyl ether, diethylene glycol monobutyl ether, diethylene glycol monohexyl ether, propylene glycol monomethyl ether, propylene glycol monoethyl ether, propylene glycol monopropyl ether, propylene glycol monobutyl ether, dipropylene glycol monomethyl ether, dipropylene glycol monoethyl ether, and dipropylene glycol monopropyl ether.

[0052] Those alcohol solvents may be used alone or in combination of two or more thereof.

[0053] Examples of the ketone solvents include acetone, methyl ethyl ketone, methyl n-propyl ketone, methyl n-butyl ketone, diethyl ketone, methyl isobutyl ketone, methyl n-pentyl ketone, ethyl n-butyl ketone, methyl n-hexyl ketone, diisobutyl ketone, trimethylnonanone, cyclohexanone, 2-hexanone, methylcyclohexanone, 2,4-pentanedione, acetylacetone, acetophenone, and fenchone. Examples thereof further include β -diketones such as acetylacetone, 2,4-hexanedione, 2,4-heptanedione, 3,5-heptanedione, 2,4-octanedione, 3,5-octanedione, 2,4-nonanedione, 3,5-nonanedione, 5-methyl-2,4-hexanedione, 2,2,6,6-tetramethyl-3,5-heptanedione, and 1,1,1,5,5,5-hexafluoro-2,4-heptanedione.

[0054] Those ketone solvents may be used alone or in combination of two or more thereof.

[0055] Examples of the amide solvents include formamide, N-methylformamide, N,N-dimethylformamide, N-ethyl-

formamide, N,N-diethylformamide, acetamide, N-methylacetamide, N,N-dimethylacetamide, N-ethylacetamide, N,N-diethylacetamide, N-methylpropionamide, N-methylpyrrolidone, N-formylmorpholine, N-formylpiperidine, N-formylpyrrolidine, N-acetylmorpholine, N-acetylpiperidine, and N-acetylpyrrolidine.

[0056] Those amide solvents may be used alone or in combination of two or more thereof.

[0057] Examples of the ester solvents include diethyl carbonate, ethylene carbonate, propylene carbonate, methyl acetate, ethyl acetate, γ -butyrolactone, γ -valerolactone, n-propyl acetate, isopropyl acetate, n-butyl acetate, isobutyl acetate, sec-butyl acetate, n-pentyl acetate, sec-pentyl acetate, 3-methoxybutyl acetate, methylpentyl acetate, 2-ethylbutyl acetate, 2-ethylhexyl acetate, benzyl acetate, cyclohexyl acetate, methylcyclohexyl acetate, n-nonyl acetate, methyl acetoacetate, ethyl acetoacetate, ethylene glycol monomethyl ether acetate, ethylene glycol monoethyl ether acetate, diethylene glycol monomethyl ether acetate, diethylene glycol monoethyl ether acetate, diethylene glycol mono-n-butyl ether acetate, propylene glycol monomethyl ether acetate, propylene glycol monoethyl ether acetate, propylene glycol monopropyl ether acetate, propylene glycol monobutyl ether acetate, dipropylene glycol monomethyl ether acetate, dipropylene glycol monoethyl ether acetate, glycol diacetate, methoxytriglycol acetate, ethyl propionate, n-butyl propionate, isoamyl propionate, diethyl oxalate, di-n-butyl oxalate, methyl lactate, ethyl lactate, n-butyl lactate, n-amyl lactate, diethyl malonate, dimethyl phthalate, and diethyl phthalate.

[0058] Those ester solvents may be used alone or in combination of two or more thereof.

[0059] Examples of the aprotic solvents include acetonitrile, dimethyl sulfoxide, N,N,N',N'-tetraethylsulfamide, hexamethylphosphoric triamide, N-methylmorpholine, N-methylpyrrole, N-ethylpyrrole, N-methyl- Δ^3 -pyrroline, N-methylpiperidine, N-ethylpiperidine, N,N-dimethylpiperazine, N-methylimidazole, N-methyl-4-piperidone, N-methyl-2-piperidone, N-methyl-2-pyrrolidone, 1,3-dimethyl-2-imidazolidinone, and 1,3-dimethyltetrahydro-2(1H)-pyrimidinone.

[0060] Especially preferred of the organic solvents enumerated above are organic solvents represented by the following formula (4):

wherein R^8 and R^9 each independently represents a hydrogen atom or a monovalent organic group selected from the group consisting of alkyl groups having 1 to 4 carbon atoms and CH_3CO- ; and e is an integer of 1 or 2.

[0061] Those organic solvents may be used alone or as a mixture of two or more thereof.

[0062] In hydrolyzing and condensing the compounds (1) to (3) in the invention, the same solvents as those enumerated above can be used.

[0063] An example of processes for producing the composition of the invention is as follows. Water or solvent-diluted water is added intermittently or continuously to a solvent containing the compounds (1) to (3) dissolved therein. In this operation, a specific basic compound may be added beforehand to the solvent or may be dissolved or dispersed in the water prior to the addition of the water. The reaction temperature in this case is generally from 0 to 100°C, preferably from 15 to 90°C.

Other Additives

[0064] Ingredients such as colloidal silica, colloidal alumina, organic polymers, surfactants, silane coupling agents, radical generators, and triazene compounds may be added to the composition for film formation obtained in the invention.

[0065] The colloidal silica is a dispersion comprising, for example, any of the aforementioned hydrophilic organic solvents and high-purity silicic acid anhydride dispersed therein. It has an average particle diameter of generally from 5 to 30 nm, preferably from 10 to 20 nm, and a solid concentration of generally about from 10 to 40% by weight. Examples of the colloidal silica include the methanol silica sol and isopropanol silica sol manufactured by Nissan Chemical Industries, Ltd. and Oscal, manufactured by Catalysts & Chemicals Industries Co., Ltd.

[0066] Examples of the colloidal alumina include Alumina Sol 520, 100, and 200, manufactured by Nissan Chemical Industries, Ltd., and Alumina Clear Sol and Alumina Sol 10 and 132, manufactured by Kawaken Fine Chemicals Co., Ltd.

[0067] Examples of the organic polymers include compounds having a sugar chain structure, vinyl amide polymers, (meth) acrylic polymers, aromatic vinyl compounds, dendrimers, polyimides, poly(amic acid)s, polyarylenes, polyamides, polyquinoxaline, polyoxadiazole, fluoropolymers, and compounds having a poly(alkylene oxide) structure.

[0068] Examples of the compounds having a poly(alkylene oxide) structure include compounds having a poly(methylene oxide) structure, poly(ethylene oxide) structure, poly(propylene oxide) structure, poly(tetramethylene oxide) structure, poly(butylene oxide) structure, or the like.

[0069] Specific examples thereof include ether type compounds such as polyoxymethylene alkyl ethers, polyoxyeth-

ylene alkyl ethers, polyoxyethylene alkylphenyl ethers, polyoxyethylene sterol ethers, polyoxyethylene lanolin derivatives, ethylene oxide derivatives of alkylphenol formalin condensates, polyoxyethylene/polyoxypropylene block copolymers, and polyoxyethylene/polyoxypropylene alkyl ethers; ether-ester type compounds such as polyoxyethylene glycerol fatty acid esters, polyoxyethylene sorbitan fatty acid esters, polyoxyethylene sorbitol fatty acid esters, and polyoxyethylene fatty acid alkanolamide sulfuric acid salts; and ether-ester type compounds such as polyethylene glycol fatty acid esters, ethylene glycol fatty acid esters, fatty acid monoglycerides, polyglycerol fatty acid esters, sorbitan fatty acid esters, propylene glycol fatty acid esters, and sucrose fatty acid esters.

[0070] Examples of the polyoxyethylene/polyoxypropylene block copolymers include compounds having either of the following block structures:

wherein X represents $-\text{CH}_2\text{CH}_2\text{O}-$; Y represents $-\text{CH}_2\text{CH}(\text{CH}_3)\text{O}-$; j is a number of 1 to 90; k is a number of 10 to 99; and l is a number of 0 to 90.

[0071] More preferred of those compounds enumerated above are ether type compounds such as polyoxyethylene alkyl ethers, polyoxyethylene/polyoxypropylene block copolymers, polyoxyethylene/polyoxypropylene alkyl ethers, polyoxyethylene glycerol fatty acid esters, polyoxyethylene sorbitan fatty acid esters, and polyoxyethylene sorbitol fatty acid esters.

[0072] Those compounds may be used alone or in combination of two or more thereof.

[0073] Examples of the surfactants include nonionic surfactants, anionic surfactants, cationic surfactants, and amphoteric surfactants, and further include fluorochemical surfactants, silicone surfactants, poly(alkylene oxide) surfactants, and poly(meth)acrylate surfactants. Preferred of these are fluorochemical surfactants and silicone surfactants.

[0074] The fluorochemical surfactants are ones comprising a compound having a fluoroalkyl or fluoroalkylene group in at least one position selected from the ends, main chain, and side chains. Examples thereof include 1,1,2,2-tetrafluorooctyl 1,1,2,2-tetrafluoropropyl ether, 1,1,2,2-tetrafluorooctyl hexyl ether, octaethylene glycol di(1,1,2,2-tetrafluorobutyl) ether, hexaethylene glycol 1,1,2,2,3,3-hexafluoropentyl ether, octapropylene glycol di(1,1,2,2-tetrafluorobutyl) ether, hexapropylene glycol di(1,1,2,2,3,3-hexafluoropentyl) ether, sodium perfluorododecylsulfonate, 1,1,2,2,8,8,9,9,10,10-decafluorododecane, 1,1,2,2,3,3-hexafluorodecane, N-[3-perfluorooctanesulfonamido]propyl-N,N'-dimethyl-N-carboxymethylene ammonium betaine, perfluoroalkylsulfonamidopropyltrimethyl ammonium salts, perfluoroalkyl-N-ethylsulfonyl glycine salts, bis(N-perfluorooctylsulfonyl-N-ethylaminoethyl) phosphate, and monoperfluoroalkylethyl phosphates.

[0075] Commercially available products of such fluorochemical surfactants include products available under the trade names of Megafac F142D, F172, F173, and F183 (manufactured by Dainippon Ink & Chemicals, Inc.); F-Top EF301, EF303, and EF352 (manufactured by New Akita Chemical Company); Fluorad FC-430 and FC-431 (manufactured by Sumitomo 3M Ltd.); Asahi Guard AG710 and Surflon S-382, SC-101, SC-102, SC-103, SC-104, SC-105, and SC-106 (manufactured by Asahi Glass Co., Ltd.); BM-1000 and BM-1100 (manufactured by Yusho K.K.); and NBX-15 (manufactured by NEOS Co., Ltd.). Especially preferred of these are Megafac F172, BM-1000, BM-1100, and NBX-15.

[0076] Examples of the silicone surfactants include SH7PA, SH21PA, SH30PA, and ST94PA (all manufactured by Dow Corning Toray Silicone Co., Ltd.). Especially preferred of these are SH28PA and SH30PA.

[0077] The amount of such a surfactant to be used is usually from 0.0001 to 10 parts by weight per 100 parts by weight of ingredient (A) (in terms of the product of complete hydrolysis and condensation).

[0078] Those surfactants may be used alone or in combination of two or more thereof.

[0079] Examples of the silane coupling agents include 3-glycidyloxypropyltrimethoxysilane, 3-aminoglycidyloxypropyltriethoxysilane, 3-methacryloxypropyltrimethoxysilane, 3-glycidyloxypropylmethyldimethoxysilane, 1-methacryloxypropylmethyldimethoxysilane, 3-aminopropyltrimethoxysilane, 3-aminopropyltriethoxysilane, 2-aminopropyltrimethoxysilane, 2-aminopropyltriethoxysilane, N-(2-aminoethyl)-3-aminopropyltrimethoxysilane, N-(2-aminoethyl)-3-aminopropylmethyldimethoxysilane, 3-ureidopropyltrimethoxysilane, 3-ureidopropyltriethoxysilane, N-ethoxycarbonyl-3-aminopropyltrimethoxysilane, N-ethoxycarbonyl-3-aminopropyltriethoxysilane, N-triethoxysilylpropyltriethylenetriamine, N-trimethoxysilylpropyltriethylenetriamine, 10-trimethoxysilyl-1,4,7-triazadecane, 10-triethoxysilyl-1,4,7-triazadecane, 9-trimethoxysilyl-3,6-diazanonyl acetate, 9-triethoxysilyl-3,6-diazanonyl acetate, N-benzyl-3-aminopropyltrimethoxysilane, N-benzyl-3-aminopropyltriethoxysilane, N-phenyl-3-aminopropyltrimethoxysilane, N-phenyl-3-aminopropyltriethoxysilane, N-bis(oxyethylene)-3-aminopropyltrimethoxysilane, and N-bis(oxyethylene)-3-aminopropyltriethoxysilane.

[0080] Those silane coupling agents may be used alone or in combination of two or more thereof.

[0081] Examples of the radical generators include isobutyryl peroxide, α,α' -bis(neodecanoylperoxy)diisopropylbenzene, cumyl peroxyneodecanoate, di-n-propyl peroxydicarbonate, diisopropyl peroxydicarbonate, 1,1,3,3-tetramethylbutyl peroxyneodecanoate, bis(4-t-butylcyclohexyl) peroxydicarbonate, 1-cyclohexyl-1-methylethyl peroxyneodecanoate, di-2-ethoxyethyl peroxydicarbonate, di-2-ethylhexyl peroxydicarbonate, t-butyl peroxyneodecanoate, dimethoxybutyl peroxydicarbonate, di(3-methyl-3-methoxybutyl) peroxydicarbonate, t-butyl peroxyneodecanoate, 2,4-dichlorobenzoyl peroxide, t-hexyl peroxyneodecanoate, 3,5,5-trimethylhexanoyl peroxide, octanoyl peroxide, lauroyl peroxide, stearoyl peroxide, 1,1,3,3-tetramethylbutyl peroxy-2-ethylhexanoate, succinic peroxide, 2,5-dimethyl-2,5-di(2-ethylhexanoylperoxy)hexane, 1-cyclohexyl-1-methylethyl peroxy-2-ethylhexanoate, t-hexyl peroxy-2-ethylhexanoate, t-butyl peroxy-2-ethylhexanoate, m-toluoyl benzoyl peroxide, benzoyl peroxide, t-butyl peroxyisobutyrate, di-t-butylperoxy-2-methylcyclohexane, 1,1-bis(t-hexylperoxy)-3,3,5-trimethylcyclohexane, 1,1-bis(t-hexylperoxy)cyclohexane, 1,1-bis(t-butylperoxy)-3,3,5-trimethylcyclohexane, 1,1-bis(t-butylperoxy)cyclohexane, 2,2-bis(4,4-di-t-butylperoxycyclohexyl)propane, 1,1-bis(t-butylperoxy)cyclodecane, t-hexyl peroxyisopropylmonocarbonate, t-butyl peroxy maleate, t-butyl peroxy-3,3,5-trimethylhexanoate, t-butyl peroxy laurate, 2,5-dimethyl-2,5-di(m-toluoylperoxy)hexane, t-butyl peroxyisopropylmonocarbonate, t-butyl peroxy-2-ethylhexylmonocarbonate, t-hexyl peroxybenzoate, 2,5-dimethyl-2,5-di(benzoylperoxy)hexane, t-butyl peroxyacetate, 2,2-bis(t-butylperoxy)butane, t-butyl peroxybenzoate, n-butyl 4,4-bis(t-butylperoxy)valerate, di-t-butyl peroxyisophthalate, α,α' -bis(t-butylperoxy)diisopropylbenzene, dicumyl peroxide, 2,5-dimethyl-2,5-di(t-butylperoxy)hexane, t-butylcumyl peroxide, di-t-butyl peroxide, p-menthane hydroperoxide, 2,5-dimethyl-2,5-di(t-butylperoxy)hexyne-3, diisopropylbenzene hydroperoxide, t-butyl trimethylsilyl peroxide, 1,1,3,3-tetramethylbutyl hydroperoxide, cumene hydroperoxide, t-hexyl hydroperoxide, t-butyl hydroperoxide, and 2,3-dimethyl-2,3-diphenylbutane.

[0082] The amount of such a radical generator to be added is preferably from 0.1 to 10 parts by weight per 100 parts by weight of the polymer.

[0083] Those radical generators may be used alone or in combination of two or more thereof.

[0084] Examples of the triazene compounds include 1,2-bis(3,3-dimethyltriazenyl)benzene, 1,3-bis(3,3-dimethyltriazenyl)benzene, 1,4-bis(3,3-dimethyltriazenyl)benzene, bis(3,3-dimethyltriazenylphenyl) ether, bis(3,3-dimethyltriazenylphenyl)methane, bis(3,3-dimethyltriazenylphenyl) sulfone, bis(3,3-dimethyltriazenylphenyl) sulfide, 2,2-bis[4-(3,3-dimethyltriazenylphenoxy)phenyl]-1,1,1,3,3,3-hexafluoropropane, 2,2-bis[4-(3,3-dimethyltriazenylphenoxy)phenyl]propane, 1,3,5-tris(3,3-dimethyltriazenyl)benzene, 2,7-bis(3,3-dimethyltriazenyl)-9,9-bis[4-(3,3-dimethyltriazenyl)phenyl]fluorene, 2,7-bis(3,3-dimethyltriazenyl)-9,9-bis[3-methyl-4-(3,3-dimethyltriazenyl)phenyl]fluorene, 2,7-bis(3,3-dimethyltriazenyl)-9,9-bis[3-phenyl-4-(3,3-dimethyltriazenyl)phenyl]fluorene, 2,7-bis(3,3-dimethyltriazenyl)-9,9-bis[3-propenyl-4-(3,3-dimethyltriazenyl)phenyl]fluorene, 2,7-bis(3,3-dimethyltriazenyl)-9,9-bis[3-fluoro-4-(3,3-dimethyltriazenyl)phenyl]fluorene, 2,7-bis(3,3-dimethyltriazenyl)-9,9-bis[3,5-difluoro-4-(3,3-dimethyltriazenyl)phenyl]fluorene, and 2,7-bis(3,3-dimethyltriazenyl)-9,9-bis[3-trifluoromethyl-4-(3,3-dimethyltriazenyl)phenyl]fluorene.

[0085] Those triazene compounds may be used alone or in combination of two or more thereof.

Methods for Preparing the Composition for Film Formation

[0086] Methods for preparing the composition for film formation of the invention are not particularly limited. For example, the composition may be prepared by mixing compounds (1) to (3) in a solvent, adding water thereto continuously or intermittently to conduct hydrolysis and condensation to prepare ingredient (A), and then adding ingredient (B) thereto.

[0087] Specific examples of methods for preparing the composition of the invention include the following methods 1) to 11).

1) A method in which a given amount of water is added to a mixture comprising compounds (1) to (3) for constituting ingredient (A), a specific basic compound, and an organic solvent to conduct hydrolysis and condensation reactions.

2) A method in which a given amount of water is added continuously or intermittently to a mixture comprising compounds (1) to (3) for constituting ingredient (A), a specific basic compound, and an organic solvent to conduct hydrolysis and condensation reactions.

3) A method in which given amounts of water and a specific basic compound are added to a mixture comprising compounds (1) to (3) for constituting ingredient (A) and an organic solvent to conduct hydrolysis and condensation reactions.

4) A method in which given amounts of water and a specific basic compound are added continuously or intermittently to a mixture comprising compounds (1) to (3) for constituting ingredient (A) and an organic solvent to conduct hydrolysis and condensation reactions.

5) A method in which a given amount of compounds (1) to (3) for constituting ingredient (A) are added to a mixture comprising an organic solvent, water, and a specific basic compound to conduct hydrolysis and condensation reactions.

6) A method in which a given amount of compounds (1) to (3) for constituting ingredient (A) are added continuously or intermittently to a mixture comprising an organic solvent, water, and a specific basic compound to conduct hydrolysis and condensation reactions.

7) A method in which a given amount of compounds (1) to (3) for constituting ingredient (A) are added to a mixture comprising an organic solvent, water, and a specific basic compound to conduct hydrolysis and condensation reactions, and a pH regulator is added to the resultant solution.

8) A method in which a given amount of compounds (1) to (3) for constituting ingredient (A) are added to a mixture comprising an organic solvent, water, and a specific basic compound to conduct hydrolysis and condensation reactions, and a pH regulator is added to the resultant solution after the solution is concentrated to a given concentration.

9) A method in which the solution obtained by any of methods 1) to 8) above is extracted with another organic solvent.

10) A method in which the organic solvent of the solution obtained by any of methods 1) to 8) above is replaced with another organic solvent.

11) A method in which the solution obtained by any of methods 1) to 8) above is extracted with another organic solvent, which is then replaced with another organic solvent.

[0088] The composition of the invention thus obtained has a total solid concentration of preferably from 2 to 30% by weight. The solid concentration thereof is suitably regulated according to the intended use thereof. When the composition has a total solid concentration of from 2 to 30% by weight, the composition not only gives a coating film having an appropriate thickness but has better storage stability.

[0089] The total solid concentration of the composition is regulated, according to need, by means of concentration or dilution with the organic solvent (B).

[0090] For applying the composition of the invention to a substrate such as a silicon wafer, SiO₂ wafer, or SiN wafer, use may be made of a coating technique such as spin coating, dip coating, roll coating, or spraying.

[0091] This coating operation can be conducted so as to form a coating film having a thickness on a dry basis of about from 0.05 to 2.5 μm in the case of single coating or about from 0.1 to 5.0 μm in the case of double coating. Thereafter, the wet coating film may be dried at ordinary temperature or dried with heating at a temperature of about from 80 to 600°C usually for about from 5 to 240 minutes. Thus, a vitreous or macromolecular insulating film can be formed.

[0092] In this operation, heating can be conducted with a hot plate, oven, furnace, or the like, for example, in the air, in a nitrogen or argon atmosphere, under vacuum, or under reduced pressure having a controlled oxygen concentration. Irradiation with electron beams or ultraviolet also can be used for forming a coating film.

[0093] In order to control the curing rate of the coating film, stepwise heating or a suitably selected atmosphere, such as a nitrogen, air, oxygen, or reduced-pressure atmosphere, can be used according to need.

[0094] The silica-based film of the invention thus obtained has a density of generally from 0.35 to 1.2 g/cm³, preferably from 0.4 to 1.1 g/cm³, more preferably from 0.5 to 1.0 g/cm³. If the density of the film is lower than 0.35 g/cm³, the coating film has impaired mechanical strength. On the other hand, if the density thereof exceeds 1.2 g/cm³, a low dielectric constant cannot be obtained.

[0095] When the silica-based film of the invention is examined for pore size distribution by the BJH method, no pores of 10 nm or larger are observed therein. The film is hence suitable for use as an interlayer insulating film material for insulation between fine wirings.

[0096] Furthermore, the silica-based film of the invention is characterized by having low water absorption. For example, when the coating film is allowed to stand in an atmosphere of 127°C, 2.5 atm, and 100% RH for 1 hour, then no water adsorption on the coating film is observed by IR spectroscopy.

[0097] This water absorption can be regulated by controlling the amount of a tetraalkoxysilane used in the invention as a compound (1) in preparing the composition for film formation.

[0098] The silica-based film of the invention has a dielectric constant of generally from 2.6 to 1.2, preferably from 2.5 to 1.2, more preferably from 2.4 to 1.2.

[0099] The interlayer insulating film thus obtained is excellent in dielectric constant characteristics after a PCT, resistance to CMP after a PCT, and adhesion to substrates after a PCT. Consequently, this coating film is useful in applications such as interlayer insulating films or etching stopper films for semiconductor devices such as LSIs, system LSIs, DRAMs, SDRAMs, RDRAMs, and D-RDRAMs, protective films such as surface coat films for semiconductor devices, interlayers for use in semiconductor production processes employing a multilayered resist, interlayer insulating films for multilayered printed circuit boards, and protective or insulating films for liquid-crystal display devices.

[0100] The invention will be explained below in more detail by reference to the following Examples. However, the following description merely shows general embodiment examples of the invention, and it should be understood that the invention is not construed as being limited by the description without particular reasons.

[0101] In the following Examples and Comparative Examples, all "parts" and "percents" are by weight unless otherwise indicated.

[0102] Various properties were evaluated by the following methods.

Radius of Gyration

[0103] Measured by gel permeation chromatography (GPC) (refractive index, viscosity, or light scattering measurement) under the following conditions.

[0104] Sample solution: A product of the hydrolysis and condensation of silane compounds was diluted with methanol containing 10 mM LiBr to a solid concentration of 0.25% to prepare a sample solution for GPC (refractive index, viscosity, or light scattering measurement).

Apparatus:

[0105]

GPC system: Model GPC-8020, manufactured by Tosoh Corp.

Column: Alpha 5000/3000, manufactured by Tosoh Corp.

Viscosity detector and light scattering detector: Model T-60 Dual Meter, manufactured by Visco Tech Co.

Carrier solution: methanol containing 10 mM LiBr

Carrier feed rate: 1 ml/min

Column temperature: 40°C

Dielectric Constant after PCT

[0106] A composition sample was applied to an 8-inch silicon wafer by spin coating. The coated substrate was dried on a hot plate first at 90°C for 3 minutes and subsequently in a nitrogen atmosphere at 200°C for 3 minutes, and was then burned on a 450°C hot plate in a vacuum (50 mTorr) for 30 minutes. The film obtained was subjected to a 1-hour PCT under the conditions of 100°C, 100% RH, and 2 atm. On this film was formed an aluminum electrode pattern by vapor deposition. Thus, a sample for dielectric constant measurement was produced. This sample was examined at a frequency of 100 kHz with electrodes HP16451B and precision LCR meter HP4284A, both manufactured by Yokogawa-Hewlett-Packard, Ltd., by the CV method to determine the dielectric constant of the coating film.

CMP Resistance after PCT

[0107] A composition sample was applied to an 8-inch silicon wafer by spin coating. The coated substrate was dried on a hot plate first at 90°C for 3 minutes and subsequently in a nitrogen atmosphere at 200°C for 3 minutes, and was then burned on a 450°C hot plate in a vacuum (50 mTorr) for 30 minutes. The film obtained was subjected to a 1-hour PCT under the conditions of 100°C, 100% RH, and 2 atm.

[0108] The coating film obtained was polished under the following conditions.

Slurry: silica/hydrogen peroxide system

Polishing pressure: 160 g/cm²

Polishing time: 180 sec

[0109] After the CMP, the appearance of the coating film was examined with a lamp for surface examination having an illuminance of 350,000 lx to evaluate CMP resistance based on the following criteria.

○: Cracks were not visually observed on the surface of the coating film.

×: Cracks were visually observed on the surface of the coating film.

Adhesion of Coating Film

[0110] A composition sample was applied to an 8-inch silicon wafer by spin coating. The coated substrate was dried on a hot plate first at 90°C for 3 minutes and subsequently in a nitrogen atmosphere at 200°C for 3 minutes, and was

then burned on a 450°C hot plate in a vacuum (50 mTorr) for 30 minutes. The film obtained was subjected to a 1-hour PCT under the conditions of 100°C, 100% RH, and 2 atm. Ten stud pins were fixed to the resultant coated substrate with an epoxy resin. After the epoxy resin applied was cured at 150°C for 1 hour, the stud pins were pulled out by the Sebastian method to evaluate the adhesion of the coating film based on the following criteria.

- O: No peeling occurred between the silicon wafer and the coating film with respect to each of the ten stud pins.
 X: Peeling occurred between the silicon wafer and the coating film.

SYNTHESIS EXAMPLE 1

[0111] Into a separable flask made of quartz were introduced 570 g of distilled ethanol, 160 g of ion-exchanged water, and 30 g of 10% aqueous tetramethylammonium hydroxide solution. The contents were stirred and homogenized. To this solution was added a mixture of 136 g of methyltrimethoxysilane and 209 g of tetraethoxysilane. The resultant solution was reacted for 2 hours while being kept at 55°C. To this solution was added 300 g of propylene glycol monopropyl ether. Subsequently, the resultant solution was concentrated with a 50°C evaporator until the concentration thereof reached 10% (in terms of the content of the product of complete hydrolysis and condensation). Thereafter, 10 g of a 10% acetic acid solution in propylene glycol monopropyl ether was added to the concentrate to obtain a reaction mixture (1).

[0112] The product of condensation and other reactions thus obtained had a radius of gyration of 13.4 nm.

SYNTHESIS EXAMPLE 2

[0113] The same procedure as in Synthesis Example 1 was conducted, except that 10% aqueous piperazine solution was used in place of 10% aqueous tetramethylammonium hydroxide solution. Thus, a reaction mixture (2) was obtained.

[0114] The product of condensation and other reactions thus obtained had a radius of gyration of 13.0 nm.

SYNTHESIS EXAMPLE 3

[0115] The same procedure as in Synthesis Example 1 was conducted, except that 10% aqueous diazabicycloundecene solution was used in place of 10% aqueous tetramethylammonium hydroxide solution. Thus, a reaction mixture (3) was obtained.

[0116] The product of condensation and other reactions thus obtained had a radius of gyration of 15.0 nm.

SYNTHESIS EXAMPLE 4

[0117] The same procedure as in Synthesis Example 1 was conducted, except that 10% aqueous sodium hydroxide solution was used in place of 10% aqueous tetramethylammonium hydroxide solution. Thus, a reaction mixture (4) was obtained.

[0118] The product of condensation and other reactions thus obtained had a radius of gyration of 14.8 nm.

SYNTHESIS EXAMPLE 5

[0119] Into a separable flask made of quartz were introduced 470.9 g of distilled ethanol, 226.5 g of ion-exchanged water, and 17.2 g of 25% aqueous tetramethylammonium hydroxide solution. The contents were stirred and homogenized. To this solution was added a mixture of 44.9 g of methyltrimethoxysilane and 68.6 g of tetraethoxysilane. The resultant solution was reacted for 2 hours while being kept at 55°C. To this solution was added 50 g of 20% aqueous nitric acid solution. The resultant mixture was sufficiently stirred and then cooled to room temperature. To this solution was added 400 g of propylene glycol monopropyl ether. Subsequently, the resultant solution was concentrated with a 50°C evaporator until the concentration thereof reached 10% (in terms of the content of the product of complete hydrolysis and condensation). Thereafter, 10 g of a 10% maleic acid solution in propylene glycol monopropyl ether was added to the concentrate to obtain a reaction mixture (5).

[0120] The product of condensation and other reactions thus obtained had a radius of gyration of 20.9 nm.

SYNTHESIS EXAMPLE 6

[0121] The same procedure as in Synthesis Example 5 was conducted, except that 25% aqueous tetrabutylammonium hydroxide solution was used in place of 25% aqueous tetramethylammonium hydroxide solution. Thus, a reaction mixture (6) was obtained.

[0122] The product of condensation and other reactions thus obtained had a radius of gyration of 22.8 nm.

SYNTHESIS EXAMPLE 7

[0123] The same procedure as in Synthesis Example 5 was conducted, except that propylene glycol monoethyl ether was used in place of propylene glycol monopropyl ether. Thus, a reaction mixture (7) was obtained.

[0124] The product of condensation and other reactions thus obtained had a radius of gyration of 20.8 nm.

SYNTHESIS EXAMPLE 8

[0125] Into a separable flask made of quartz were introduced 470.9 g of distilled ethanol, 226.5 g of ion-exchanged water, and 17.2 g of 25% aqueous tetramethylammonium hydroxide solution. The contents were stirred and homogenized. To this solution was added over 2 hours a mixture of 44.9 g of methyltrimethoxysilane and 68.6 g of tetraethoxysilane. The resultant solution was reacted for 5 hours while being kept at 59°C. To this solution was added 50 g of 20% aqueous nitric acid solution. The resultant mixture was sufficiently stirred and then cooled to room temperature. To this solution was added 400 g of propylene glycol monopropyl ether. Subsequently, the resultant solution was concentrated with a 50°C evaporator until the concentration thereof reached 10% (in terms of the content of the product of complete hydrolysis and condensation). Thereafter, 10 g of a 10% maleic acid solution in propylene glycol monopropyl ether was added to the concentrate to obtain a reaction mixture (8).

[0126] The product of condensation and other reactions thus obtained had a radius of gyration of 17.9 nm.

SYNTHESIS EXAMPLE 9

[0127] Into a separable flask made of quartz were introduced 470.9 g of distilled ethanol, 233.3 g of ion-exchanged water, and 10.4 g of 25% aqueous potassium hydroxide solution. The contents were stirred and homogenized. To this solution was added a mixture of 44.9 g of methyltrimethoxysilane and 68.6 g of tetraethoxysilane. The resultant solution was reacted for 2 hours while being kept at 52°C. To this solution was added 50 g of 20% aqueous nitric acid solution. The resultant mixture was sufficiently stirred and then cooled to room temperature. To this solution was added 400 g of propylene glycol monopropyl ether. Subsequently, the resultant solution was concentrated with a 50°C evaporator until the concentration thereof reached 10% (in terms of the content of the product of complete hydrolysis and condensation). Thereafter, 10 g of a 10% maleic acid solution in propylene glycol monopropyl ether was added to the concentrate to obtain a reaction mixture (9).

[0128] The product of condensation and other reactions thus obtained had a radius of gyration of 24.6 nm.

SYNTHESIS EXAMPLE 10

[0129] Into a separable flask made of quartz were introduced 470.9 g of distilled ethanol, 233.3 g of ion-exchanged water, and 10.4 g of 25% aqueous potassium hydroxide solution. The contents were stirred and homogenized. To this solution was added over 30 minutes a mixture of 44.9 g of methyltrimethoxysilane and 68.6 g of tetraethoxysilane. The resultant solution was reacted for 1 hour while being kept at 52°C. To this solution was added 50 g of 20% aqueous nitric acid solution. The resultant mixture was sufficiently stirred and then cooled to room temperature. To this solution was added 400 g of propylene glycol monopropyl ether. Subsequently, the resultant solution was concentrated with a 50°C evaporator until the concentration thereof reached 10% (in terms of the content of the product of complete hydrolysis and condensation). Thereafter, 10 g of a 10% maleic acid solution in propylene glycol monopropyl ether was added to the concentrate to obtain a reaction mixture (10).

[0130] The product of condensation and other reactions thus obtained had a radius of gyration of 21.6 nm.

COMPARATIVE SYNTHESIS EXAMPLE 1

[0131] The same procedure as in Synthesis Example 1 was conducted, except that 10% aqueous pyridine solution was used in place of 10% aqueous tetramethylammonium hydroxide solution. Thus, a reaction mixture (11) was obtained.

[0132] The product of condensation and other reactions thus obtained had a radius of gyration of 3.8 nm.

COMPARATIVE SYNTHESIS EXAMPLE 2

[0133] Into a separable flask made of quartz were introduced 154.24 g of methyltrimethoxysilane, 288.83 g of tetramethoxysilane, and 250 g of distilled propylene glycol monoethyl ether. To this solution was dropwise added over 1

hour 297 g of ion-exchanged water containing 10 g of maleic acid dissolved therein. The resultant solution was reacted at 50°C for 3 hours to obtain a reaction mixture (12).

[0134] The product of condensation and other reactions thus obtained had a radius of gyration of 0.2 nm.

EXAMPLE 1

[0135] The reaction mixture (1) obtained in Synthesis Example 1 was filtered through a Teflon filter having an opening diameter of 0.2 μm to obtain a composition for film formation of the invention.

[0136] The composition obtained was applied to a silicon wafer by spin coating.

[0137] After the PCT, the coating film had a dielectric constant as low as 2.27 and suffered no mars even when subjected to the CMP. Furthermore, the coating film after the PCT had satisfactory adhesion to the silicon wafer.

EXAMPLES 2 TO 10

[0138] Compositions for film formation were produced from the respective materials shown in Table 1, and were evaluated in the same manner as in Example 1. The results of evaluation obtained are shown in Table 1.

Table 1

Example	Reaction mixture	Dielectric constant after PCT	CMP resistance after PCT	Adhesion After PCT
1	Reaction mixture (1)	2.27	○	○
2	Reaction mixture (2)	2.29	○	○
3	Reaction mixture (3)	2.14	○	○
4	Reaction mixture (4)	2.16	○	○
5	Reaction mixture (5)	2.15	○	○
6	Reaction mixture (6)	2.14	○	○
7	Reaction mixture (7)	2.16	○	○
8	Reaction mixture (8)	2.10	○	○
9	Reaction mixture (9)	2.06	○	○
10	Reaction mixture (10)	1.99	○	○

COMPARATIVE EXAMPLE 1

[0139] A coating film was formed and evaluated in the same manner as in Example 1, except that the reaction mixture (11) obtained in Comparative Synthesis Example 1 was used.

[0140] Although the dielectric constant of the coating film which had undergone the PCT was 2.67, which was relatively low, this coating film suffered surface mars upon the CMP. Furthermore, as a result of the evaluation for adhesion of the coating film after the PCT, peeling occurred at the interface between the silicon wafer and the coating film with respect to five of the stud pull pins.

COMPARATIVE EXAMPLE 2

[0141] A coating film was formed and evaluated in the same manner as in Example 1, except that the reaction mixture (12) obtained in Comparative Synthesis Example 2 was used.

[0142] The dielectric constant of the coating film which had undergone the PCT was as high as 3.88. Furthermore, as a result of the evaluation for adhesion of the coating film after the PCT, peeling occurred at the interface between the silicon wafer and the coating film with respect to three of the stud pull pins.

[0143] According to the invention, a composition for film formation (interlayer insulating film material) excellent in dielectric constant characteristics after a PCT, resistance to CMP after a PCT, and adhesion to substrates after a PCT can be provided by hydrolyzing and/or condensing at least one alkoxysilane in the presence of a specific basic compound and water.

[0144] A composition for film formation which comprises:

(A) a product of hydrolysis and condensation obtained by hydrolyzing and condensing at least one silane compound selected from the group consisting of compounds represented by the formula (1), compounds represented by the formula (2), and compounds represented by the formula (3) in the presence of water and at least one compound selected from the group consisting of tetraalkylammonium hydroxides, alicyclic organic amines, and metal hydroxides, and
 (B) an organic solvent.

Claims

1. A composition for film formation which comprises:

(A) a product of hydrolysis and condensation obtained by hydrolyzing and condensing at least one silane compound selected from the group consisting of compounds represented by the following formula (1), compounds represented by the following formula (2), and compounds represented by the following formula (3) in the presence of water and at least one compound selected from the group consisting of tetraalkylammonium hydroxides, alicyclic organic amines, and metal hydroxides,

wherein R represents a hydrogen atom, a fluorine atom, or a monovalent organic group; R¹ represents a monovalent organic group; and a is an integer of 1 or 2;

wherein R² represents a monovalent organic group;

wherein R³ to R⁶ may be the same or different and each represents a monovalent organic group; b and c may be the same or different and each is a number of 0 to 2; R⁷ represents an oxygen atom, a phenylene group, or a group represented by -(CH₂)_n-, wherein n is an integer of 1 to 6; and d is 0 or 1; and
 (B) an organic solvent.

2. The composition for film formation of claim 1, wherein the tetraalkylammonium hydroxides include tetramethylammonium hydroxide, the alicyclic organic amines include piperidine derivatives, piperazine derivatives, pyrrolidine derivatives, diazabicyclooctane, diazabicyclononane, and diazabicycloundecene, and the metal hydroxides include sodium hydroxide, potassium hydroxide, and lithium hydroxide.

3. The composition for film formation of claim 1, wherein the at least one compound selected from the group consisting of tetraalkylammonium hydroxides, alicyclic organic amines, and metal hydroxides is used in an amount of from 0.00001 to 10 mol per mol of all the alkoxy groups of the silane compound.

4. The composition for film formation of claim 1, which has a pH of 7 or lower.

5. The composition for film formation of claim 1, wherein the organic solvent (B) comprises a solvent represented by the following formula (4):

wherein R⁸ and R⁹ each independently represents a hydrogen atom or a monovalent organic group selected from the group consisting of alkyl groups having 1 to 4 carbon atoms and CH₃CO-; and e is an integer of 1 or 2.

6. A method of film formation which comprises applying the composition for film formation of any one of claims 1 to 5 to a substrate and then heating the resultant coating.

7. A silica-based film obtained by the method of film formation of claim 6.
